

1. C. Albertus	Study of the semileptonic and nonleptonic decay of the Bs meson
2. D.A. Artemenkov	Study of light nuclei cluster structure with nuclear track emulsion
3. A.A. Aziz	Analysis of alpha-induced reactions cross-section
4. W. Bardan	Tests of C parity conservation in $\eta \rightarrow \pi^+ \pi^- \pi^0$ decay with WASA at COSY detector
5. R.O. Barrachina	Quantum vortices in the three-body continuum induced by the positron impact ionization of Hydrogen
6. E.F. Batista	Renormalizing chiral N3LO interaction with multiple subtractions
7. F.F. Bellotti	Universality of three-body systems in 2D: parameterization of the bound states energies
8. A. Glushkov	Energy Approach to Few-Body Finite Fermi Systems in a Super Strong Laser Field
9. A. Glushkov	Spectroscopy of Few-body Hadronic Atoms: Energy Shifts, Widths and Strong $K\pi-N$ Interaction Correction
10. C.M. Granados-Castro	Sturmian Approach To Single Photoionization of CH ₄
11. C. Gutierrez	Relativistic quark-diquark model for the nucleon
12. V.S. Iurasov	The QED Hamiltonian in the Clothed-Particle Representation (CPR)
13. R. Kezerashvili	Bose-Einstein condensate of quasiparticles in graphene
14. G. Khatri	Few-Nucleon System Dynamics Studied via Deuteron-Deuteron Breakup Reactions at 160 MeV
15. K. Khosonthongkee	Low-lying baryons in hybrid quark model
16. F. Kobayashi	Dineutron formation and breaking in ⁸ He
17. A. Limphirat	Nonstatistical moments in high-energy pp collisions
18. O.V. Marchukov	Spin-orbit Coupling in Deformed Harmonic Traps
19. W. Parol	Investigation of three nucleon force effects in deuteron-proton breakup reaction
20. W. Poonsawat	Study of $\bar{K}N$ Interactions
21. G.J. Rampho	Electrodisintegration of few-nucleon systems using antisymmetrized molecular dynamics
22. D. Samart	Box-diagram calculation of kaon photoproduction at $K^* \Lambda$ and $K^* \Sigma$ thresholds
23. T. Sawada	Proposal to extend the nuclear physics to include the magnetically charged particle as an additional ingredient
24. P. Srisawat	Kaon production with a repulsive in-medium kaon potential in nucleus-nucleus collisions
25. V.M. Suslov	Neutron-deuteron scattering observables at $E_{lab} = 14.1$ MeV
26. E. Tomusiak	Transverse (e,e') Response Functions for ⁴ He
27. L.A. Trevisan	The exact solution for the Dirac equation with the Cornell potential
28. Sh. Tsikluari	Triexciton as a system of the three dipoles in two dimensional quantum dots
29. B. Vlahovic	Faddeev calculations for systems of non-identical particles
30. A.G. Volosniev	Borromean Binding in Two Dimensions
31. E. Yarevsky	On the scattering of the electron off the hydrogen atom and helium ion below and above the ionization threshold: Temkin-Poet model
32. S.V. Zuyev	The results of simulation of $d+t$
